REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the references of record neither reveal nor render obvious the recited combination including the concept of having clock signals for input, reset, and references nodes all out of phase with each other.

U.S. Patent 6,853,241 to Fujimoto et al discloses a switched-capacitor amplifier having sampling and hold phases, but does not provide three different clock signals. U.S. Patent 6,801,146 to Kernahan et al shows a sample and hold circuit having a switched capacitor network [3016.4]. U.S. Patent 6,784,824 to Quinn provides a clock generator [626] for a switched capacitor ADC. U.S. Patent 6,683,514 to Fujimoto describes a switched capacitor circuit with multiple clock signals, but lacks the out-of-phase input, reset, and reference clocks found in this application. U.S. Patent 6,621,444 to Confalonieri et al shows a switched capacitor DAC having a divided bit clock period. U.S. Patent 6,169,509 to Abe describes a switched capacitor DAC having output and reset modes. U.S. Patent 6,147,522 to Rhode et al discloses switched capacitor circuitry having first and second operating phases.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
